

RELIABILITY YOU CAN COUNT ON

ELBIT COMPUTERS LTD.

Elbit's systems range from low cost CRT terminals to computer systems capable of reading, processing, editing, updating and storing information. The products described here are representative of those available. These products are integral parts of the systems we build.

The Elbit CRT terminal line was created for efficiency, power and performance, all at a very competitive price. This combination of realistic price and extensive capabilities makes the DS 377 and DS 1920 terminals most attractive products in today's market. The DS 377 is a fully IBM compatible terminal. The DS 1920 is a sophisticated stand alone terminal. These terminals incorporate only quality components. They have been built according to the highest standards of the computer industry. Both terminals are adaptable to a large variety of applications.

Elbit terminals ease the burden of a continuing succession of transactions, by processing and proving results in a single efficient operation.

DS 1920/377 CRT Terminals

The growing use of shared computer systems has resulted in an extraordinary demand for terminal equipment, particularly CRT Displays. The speed, quietness, and operator flexibility provided by a display terminal makes it an ideal peripheral device for remote or local computer time sharing. Elbit Computers Ltd. now makes it possible for every computer user to add display terminals to his system. This is due to the low cost/high performance of the series DS stand alone displays.

Their uses are many and varied.

- On-line planning
- Claims servicing
- Credit checking
- Order entry
- Inventory control
- Cost accounting
- Text editing
- Process control
- Law enforcement
- Distribution management
- Management information systems
- Operator/computer interaction

Reservation Systems. Airline, hotel, theatre and automobile rental reservation systems are improved through the rapid interaction of an agent with a powerful computer for the request and confirmation of a seat, room or vehicle.

Portfolio Management. With instant availability of factual information on stock performance, stock brokers and fund managers can make more detailed and accurate analyses of customer requirements.

Medical Information Systems. Display terminals can now be used in environments which demand speed and silent operation. Hospital applications include patient history reference, admitting, billing.

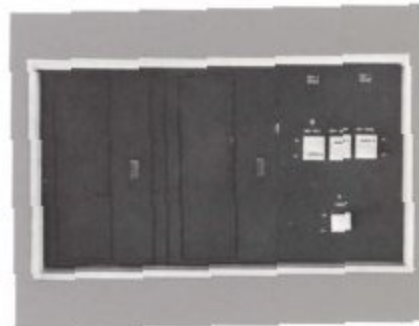

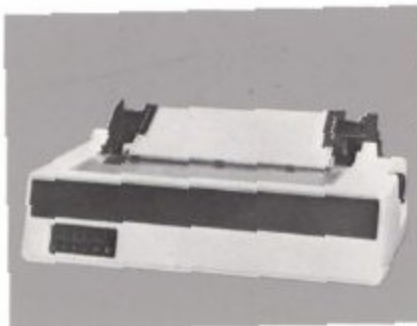

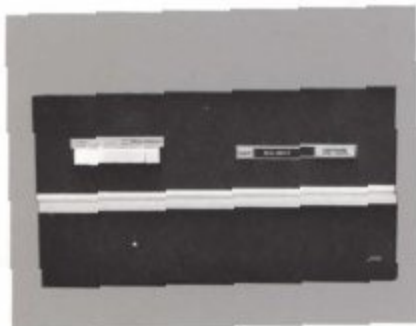

PACT SYSTEM

**Programmable
Asynchronous
Clustered
Teleprocessing**

Elbit's PACT system is a remarkable improvement in efficiency and economy for today's intelligence oriented world. Modern businesses with remote locations can now tie in sales offices, warehouses, distributors and branches by applying the PACT System concept. Information can be made available to personnel at their work sites, office, loading dock, laboratory, accounting departments. The PACT System opens up a world of new opportunities for the modern growing

company. PACT is the opportunity to benefit from high speed data processing at the very lowest cost. An opportunity to expand in manageable steps and to realize the improved return on investment of time and money. Keypact, Datapact, Interpact... These systems are supplied with a full range of peripheral equipment. To support the PACT system there is a variety of peripheral options that enables the user to configure a system precisely to his needs.

Elbit systems are fully supported by the worldwide operations of Elbit Ltd. In addition to add-on or replacement products and maintenance services, Elbit offers consulting services through its dedicated sales offices.
