## Process Control Microcomputer Systems

Briquetting plant process control room using Messina Electronics' systems

Brewer's process control system undergoing production tests

The high level of expertise in computer process control, which has been accumulated since the Company's formation, has made Messina a leader in South Africa in the field of "turnkey" systems. The Company has supplied successful systems for the mining industry, as well as for food processing and refining, furnace control, batching and blending applications as well as for energy management.

Messina's project management resources allow it to tackle projects at the design stage and take them through to commissioning and final handover.

Systems are continually being developed not only to meet market demand, but to cater for specific customer needs to stringent specifications, thus enabling the Company to bring to the customer the product he needs, rather than adapting the product to his requirements.
